

Kitsap Transit MOA Base

Bremerton, Washington

The project included expansion and retrofitting of the existing maintenance facility while portions remained operational. The project was multi-phased, starting with the site work/screen wall and finishing with the administrative space additions. The scale and sensitivity to the neighborhood were key issues. The operational efficiency for the MOA base was the key goal for Kitsap Transit.

Project Data

Date of Occupancy: 1991

Cost: \$4 million

Size of Project: 28,000 square feet
