

# St. Andrew Parish

Sumner, Washington

Merritt designed the new St. Andrew Parish master plan based on extensive communication with the building committee and parish members to define the church and accessory facilities on a new church site. He managed the project from pre-design through construction administration. The church included a worship space, interior gathering space, meeting rooms, and support spaces of approximately 18,000 sq. ft. The ultimate plan was to locate the parish offices, classrooms, social hall, and support spaces on the campus under Phase 2.

The challenge in parish design is to create a place of worship, while still creating a functional space.
