# Institute of Technology, University of Washington-Tacoma

Tacoma, Washington

Merritt Arch's responsibility included programming, design, document production, bidding, and construction administration for adaptive reuse of a 3-story historic masonry building on the University of Washington Tacoma Campus to house the Institute of Technology. The design included technical computer labs, computer classrooms, institute administration and counselor offices as well as support spaces. The first "smart board" on the Tacoma Campus is housed in the conference room. This project embodies the client relationship, user interaction, and construction challenges.
